SUMMARY

Computer Engineering graduate with internship and research experience in Agentic AI, RAG systems, machine learning, and NLP. Has worked in CI/CD processes using GitHub Actions and Google Cloud Platform, Docker, and Kubernetes; currently conducting Turkish natural language processing research under TÜBİTAK 2209-A. Actively developing himself in artificial intelligence and cloud technologies.

EXPERIENCE

Software Engineering Intern - AI Team | SOCRadar Extended Threat Intelligence Inc.

January 2026 -
Present (6 months)

- Developed Agentic AI architectures and multi-agent platform integrations.
- Designed and implemented RAG-based pipelines.
- Contributed to a phishing detection project using various machine learning approaches.
- Performed fine-tuning on a BERT model.
- Built basic crawlers for web scraping.
- Containerized trained models with Docker and deployed them on Kubernetes.
- Participated in model serving and deployment processes on Google Cloud Platform (GCP).

Hardware Engineering Intern | TEPE Bilişim Teknolojileri San. ve Tic. Ltd. Şti.

August - September
2024

- Performed hardware and software fault diagnosis and repair on POS devices.

EDUCATION

Computer Engineering - GPA: 3.59 | Istanbul Commerce University

Sep 2022 - Jul 2026

Applied Computer Science & AI (Erasmus) | Sapienza University, Rome

Feb - Jul 2025

42 | Istanbul - Software Training: C, C++, Unix, Algorithms

2024 - 2025

PROJECTS

Multi-Agent Debate Platform for Argument Analysis and Improvement (Graduation Project): A multi-agent debate system that leverages a fine-tuned ModernBERT model to analyze, score, and improve argument structures in text.

Hardware-Aware ML Kernel Library (macOS): Development of a machine learning kernel library focused on low-level hardware optimizations for the macOS platform.

Time Series Forecasting (Sapienza): Weather and energy consumption forecasting using Retrieval Augmented Diffusion Models. PyTorch, Scikit-learn.

NLP & Machine Learning (Sapienza): Restaurant type classification and sentiment analysis, Credit Card Fraud Detection, content-based Movie Recommendation System.

TÜBİTAK 2209-A: Detection of argument structures and relations in Turkish texts using AI methods (ongoing research project).

libc Reimplementation (Ecole 42): Ground-up rewrite of the standard C library with a focus on memory management and low-level system programming.

TECHNICAL SKILLS

AI / ML: Agentic AI, Vector DB, AI Agent Orchestration, RAG, BERT, Fine-Tuning, NLP, PyTorch, Scikit-learn

Programming: Python, C, SQL, JavaScript, C#

Cloud & DevOps: GitHub Actions, Google Cloud Platform (GCP), Docker, Kubernetes, Unix/Linux, Git

Web Development: HTML/CSS/JavaScript, React (Basic), .NET, MVC Architecture

LANGUAGES & CERTIFICATIONS

English: B2-C1 (American Culture Language Course C1 Certificate) Arabic / Italian: A2

LangChain Academy Certificate | LangChain • n8n Course: AI Agent Builder | Simplilearn • MATLAB Onramp and Fundamentals
